## Ship Entertainment System

Crew retention is crucial for maintaining the economic manning, and therefore, the operational flexibility of ship personnel. With this in mind NSSLGlobal offers a suite of low cost crew internet and entertainment services via a variety of payment options to suit all budgets.

CrewVision is NSSLGlobal's new ship entertainment service offering a wide variety of viewing content and utilises a dedicated multi-broadcast channel over our VSAT network. This unique feature of NSSLGlobal's VSAT IP@SEA service ensures that the vessels data speeds or voice quality are unaffected by the content downloads and also requires no additional hardware. Furthermore content is continually refreshed using NSSLGlobal's network capacity, not the vessels airtime, so there is no impact on the user experience.

CrewVision provides on-demand access to a wide variety of Movies, TV Drama, documentaries, and daily world news. The service can be provided either in communal areas on board, or if suitable Wireless Access Points are specified across the vessel, then viewing can take place by individual crew members in their own cabins using their tablets/PCs accordingly.

Ship operators can benefit and be re-assured in the following ways: a) their ship's staff can experience faster internet speeds as a result of separating Crew Entertainment viewing from Operational and Crew Welfare internet use: b) be assured that all Crew Vision content has the applicable entertainment licences. This is an ever rising risk to vessel owners, operators and managers who are responsible if their crew download illegal content. Rather than having to put in measures to police their crew usage, our CrewVision service provides legal content thereby ensuring that no entertainment licence laws are breached in the viewing of the latest movies and entertainment.

Entertainment and news is provided in various languages and NSSLGlobal continues to expand its content to include more regional programming to accommodate the variety of crew nationality. Please speak to us for more details of what is coming.
