

NSSLGlobal is a leading independent provider of satellite communications and IT solutions with innovation and customer service at the core of its DNA. We have service and sales offices globally including UK, Singapore, Germany, Denmark, Poland, Norway, US and South Africa.

What is Cruise Control+?

Our next generation Cruise Control+, is the leading cost effective, single server solution for seamless management of communication, IT and Security services on board vessels. Cruise Control+ gives you greater support, space savings and improved capacity management. You retain control over all aspects of the vessels data and voice communications.

With our new virtualised environment within the Cruise Control+ appliance, we are now able to offer management of operating systems, security and cloud hosted file and print services and software applications.

- Vessels Communication Management
- In-built Cybersecurity
- Provide your Cloud Hosting and IT Management
- Management Overview & Control Portal
- Value added Services – CrewVision, Crew UNITE, Email, Integrated IP PBX

Simplifying cybersecurity at sea

NSSLGlobal works with governments, superyacht owners, commercial organisations and independent vessel owners. Our solutions always ensure you are able to maintain full control of your network and infrastructure. With 50 years industry expertise we work with you to provide the best solution for you.

With decades of designing and deploying secure systems for governments we have developed our next generation Cruise Control+ which has security built into the solution to provide robust cybersecurity at sea. From hub-side to vessel-side controls, NSSLGlobal has a range of end-point infrastructure protections in place to ensure customers are cyber secure at sea.

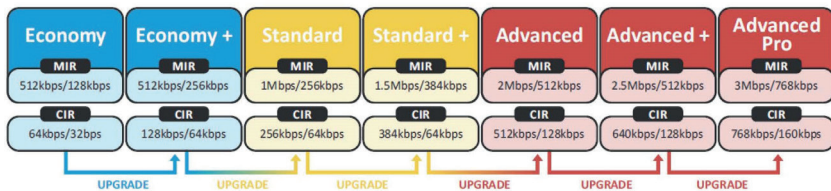

For further details of our cybersecurity please speak with us today or visit www.nsslglobal.com.
